

A.I. driven school management system.

Admissions, attendance, examinations, fees and government returns — with intelligence built into every one of them. It reads your own records and tells you which child needs you, today.

-  **One pupil in three hundred and ninety.** Found on a Tuesday morning — not in the results at the end of the year.

Student Alert System PER CHILD

Watches every pupil day by day, not as a percentage. Two children on the same 68% are not the same problem — it knows which one has quietly stopped coming, and warns you who will miss the 75% exam bar while there is still time to act.

Data Quality

Finds what UDISE+ would reject — before you upload, down to the exact pupil and the exact field.

Scholarship Match

Matches every pupil against Tamil Nadu and Government of India schemes, so families stop missing money they are entitled to.

See it working

brightneuronlabs.ca/apps/school

Nothing about a child leaves your school. Every engine runs on your own data, on your own system.
